Rhodium

Equilibrium reactions	lg*K* at infinite dilution and *T* = 298 K		
	Perrin et al., 1969	Baes and Mesmer, 1976	Brown and Ekberg, 2016
$Rh^{3+} + H_2O \rightleftharpoons RhOH^{2+} + H^+$	–3.43	–3.4	–3.09 ± 0.1
$Rh(OH)_3(c) + OH^- \rightleftharpoons Rh(OH)_4^-$		–3.9

Distribution diagrams

These diagrams have been computed at two Rh concentrations (1 mM = $1x10^{-3}$ mol L^{-1} and 1 μM = $1x10^{-6}$ mol L^{-1}) with the 'best' equilibrium constant above (in green). Calculations assume T = 298 K for the limiting case of zero ionic strength (*i.e.*, even neglecting plotted ions).
