Distribution diagrams

These diagrams have been computed at two Pb(II) concentrations ($1 \text{ mM} = 1 \times 10^{-3} \text{ mol L}^{-1}$ and $1 \text{ }\mu\text{M} = 1 \times 10^{-6} \text{ mol L}^{-1}$) with the 'best' equilibrium constants above (in green). Calculations assume $T = 298 \text{ K}$ for the limiting case of zero ionic strength (*i.e.*, even neglecting plotted ions).

Equilibrium constants for hydrolysis and associated equilibria in critical compilations

Lead(IV)

Equilibrium reactions	lgK at infinite dilution and $T = 298 \text{ K}$
	Powell et al., 2009
$\beta\text{-PbO}_2 + 2 \text{ H}_2\text{O} \rightleftharpoons \text{Pb}^{4+} + 4 \text{ OH}^-$	-64^a
$\beta\text{-PbO}_2 + 2 \text{ H}_2\text{O} + 2 \text{ OH}^- \rightleftharpoons \text{Pb(OH)}_6^{2-}$	-4.5^a
